

DataSync Pro - Product Documentation

Anthrasync Internal Knowledge Base — Confidential

1. Overview

DataSync Pro is Anthrasync's enterprise data integration platform. It connects to over 200 data sources, transforms data through a visual pipeline builder, and loads it into the destination of your choice. It is designed for analytics teams who need reliable, automated data movement.

2. Key Features

- Visual pipeline builder with drag-and-drop transformations.
- Incremental sync to move only changed records and reduce load.
- Built-in scheduling with cron-style and event-based triggers.
- Role-based access control and full audit logging.
- Real-time monitoring dashboard with alerting via email and Slack.

3. Editions and Pricing

DataSync Pro is offered in three editions. The Starter edition supports up to 5 pipelines and 1 million rows per month. The Growth edition supports up to 50 pipelines and 50 million rows per month. The Enterprise edition offers unlimited pipelines, dedicated support, and a 99.9% uptime SLA.

4. System Requirements

The cloud version requires only a modern web browser. The self-hosted version requires a Linux server with at least 8 GB RAM, 4 CPU cores, and 50 GB of available disk space. Docker 20.10 or later is required for the self-hosted deployment.

5. Supported Integrations

DataSync Pro supports databases including PostgreSQL, MySQL, SQL Server, and MongoDB; warehouses including Snowflake, BigQuery, and Redshift; and SaaS sources including Salesforce, HubSpot, and Google Analytics. New connectors are released monthly.

6. Data Retention

Pipeline run logs are retained for 90 days on the Starter and Growth editions and 365 days on the Enterprise edition. Sync history beyond the retention window is archived and can be restored on request.
